Research abstract (300 words maximum)

Background: State the gaps in knowledge that are directly relevant and the specific aims of the study.

Methods: Describe the study design, setting, participants, primary outcome measures, data collection processes and methods of analysis.

Results: Present the most important findings directly related to the stated aims. If results are incomplete at this point make clear what results may be expected at the time of presentation.

Conclusions: State the degree to which the aims have been met. Summarise the clinical or scientific implications.

Innovation abstract (300 words maximum)

Background: State the gaps in practice, patient need or technology development addressed by the innovation. State the main reasons why the innovation is expected to work.

Methods: Describe the specific components of the innovation and the steps taken to set it up.

Results: Describe what was successful about the innovation and why. (Quantitative or qualitative data can be provided if available.) Describe barriers experienced and how they were addressed. If the information is incomplete at this point make clear what may be expected at the time of presentation.

Conclusions: Describe how the innovation is intended to be developed further and ideas or plans to ensure that it is viable in the longer term.
